

Does he?

Yes! He does...

**But we should
pack it out.**

RESTOP®

Bears and other forest creatures relieve themselves in the forest... so why can't we?

Well, the truth is that we can, as long as we are able to bury that waste in soil where it will decompose over time.

Leaving your waste uncovered on top of the soil might sound OK – the bears do it – but it's not. Other campers have come before you and others will follow, so the amount of exposed human waste will be ever increasing, unpleasant and potentially infectious to other humans as well as forest animals. So bury your waste whenever the conditions are right.

In some areas, however, burying your waste isn't possible or is ineffective. Consider these areas:

- High mountain, rock climbing and snow covered areas where you simply can't dig a hole
- River banks where the sandy soil doesn't contain the microorganisms necessary for natural biodegradation.
- Caves and rock canyons where holes would be as difficult to dig as they are on the mountain top

RESTOP® 2 Wilderness Waste Containment Pouch

- Sanitary
- Odor-free
- Easy to use
- Environmentally friendly
- The only chemical-free system for the safe disposal of solid waste

Restop 2 contains everything needed to safely dispose of solid human waste. Our patented "bag-in-a-bag" design and zipper-lock closure securely contains the waste and the odor. Then our special blend of polymers and enzymes instantly begins to break down the waste and turn it to

With RESTOP® 2 for solid waste, you'll never be without a restroom again!

The Wilderness Waste Containment Pouch provides a safe, sanitary and reasonably pleasant means to Pack It Out!

- The final (silver) containment pouch is constructed of a gas impervious plastic to seal in the odor and make packing it out more pleasant.
- A unique citrus "odor eater" is included as a second line of protection from offensive odors.
- The pouch is constructed with medical grade seals and high

levels of puncture resistance for added security.

- Toilet paper and an antiseptic wipe are included

with each pouch and, after use, the pouch is approved for disposal in any trash container.

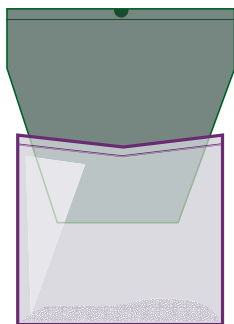

Yes, the bears do it, but if we want our children and our children's children to enjoy the beauty of our National Parks, we have to Pack It Out.

Your cooperation will be appreciated by generations to come!

deodorized gel. Use **Restop 2** with the Restop Commode or use directly on the ground.

Two Bags in One

The **Restop 2** pouch is really two bags in one. The gray liner is designed to be pulled up over the seat for extra sanitation, while the foil bag contains the polymers and enzymes to instantly gel and break down the waste.

Principles of Outdoor Ethics

Plan Ahead and Prepare

- Know the regulations and special concerns for the area you'll visit.
- Prepare for extreme weather, hazards, and emergencies.
- Schedule your trip to avoid times of high use.
- Visit in small groups. Split larger parties into groups of 4-6.
- Repackage food to minimize waste.
- Use a map and compass to eliminate the use of marking paint, rock cairns or flagging.

RESTOP PROUDLY
SUPPORTS
LEAVE NO TRACE

Travel and Camp on Durable Surfaces

- Durable surfaces are: established trails and campsites, rock, gravel, dry grasses or snow.
- Protect riparian areas by camping at least 200 feet from lakes and streams.
- Good campsites are found, not made. Altering a site is not necessary.

In popular areas

- Concentrate use on existing trails and campsites.
- Walk single file in the middle of the trail, even when wet or muddy.
- Keep campsites small. Focus activity in areas where vegetation is absent.

In pristine areas

- Disperse use to prevent the creation of campsites and trails.
- Avoid places where impacts are just beginning.

Dispose of Waste Properly

- Pack it in, pack it out. Inspect your campsite and rest areas for trash or spilled foods. Pack out all trash, leftover food, and litter.
- Deposit solid human waste in catholes dug 6 to 8 inches deep at least 200 feet from water, camp, and trails. Cover and disguise the cathole when finished.
- Pack out toilet paper and hygiene products.
- To wash yourself or your dishes, carry water 200 feet away from streams or lakes and use small amounts of biodegradable soap. Scatter strained dishwater.

Leave What You Find

- Preserve the past: examine, but do not touch, cultural or historic structures and artifacts.
- Leave rocks, plants and other natural objects as you find them.
- Avoid introducing or transporting non-native species.
- Do not build structures, furniture, or dig trenches.

Minimize Campfire Impacts

- Campfires can cause lasting impacts to the backcountry. Use a lightweight stove for cooking and enjoy a candle lantern for light.
- Where fires are permitted, use established fire rings, fire pans, or mound fires.
- Keep fires small. Only use sticks from the ground that can be broken by hand.
- Burn all wood and coals to ash, put out campfires completely, then scatter cool ashes.

Respect Wildlife

- Observe wildlife from a distance. Do not follow or approach them.
- Never feed animals. Feeding wildlife damages their health, alters natural behaviors, and exposes them to predators and other dangers.
- Protect wildlife and your food by storing rations and trash securely.
- Control pets at all times, or leave them at home.
- Avoid wildlife during sensitive times: mating, nesting, raising young, or winter.

Be Considerate of Other Visitors

- Respect other visitors and protect the quality of their experience.
- Be courteous. Yield to other users on the trail.
- Step to the downhill side of the trail when encountering pack stock.
- Take breaks and camp away from trails and other visitors.
- Let nature's sounds prevail. Avoid loud voices and noises.

WE RECYCLE!
